

Thank you for purchasing this cutting file set from [www.digitalcraftemporium.com](http://www.digitalcraftemporium.com)

To help you understand the contents of the download and what you are permitted to do with it, please find below details of file types and angel policy.

### **Angel Policy**

With this set of files you can make and sell as many hand-crafted items as you please for whatever reason you choose.

You may not however distribute the files. If you know someone that would like these files then please send them a link to this blog post.

### **File Hierarchy**

The files in this set have been organised into folders to help you find the type that you need quickly and easily.

DXF Cutting Files

EPS Image Files

FCM Cutting Files

PNG Image Files

SVG Cutting Files

An explanation of each file type is given below.

### **File Formats**

The files are supplied in the following file formats.

SVG - Scalable Vector Graphics. This is an image file type that can also be used by most home hobby cutting machines. Some machines will require the file to be converted in external software before it can be used for cutting.

DXF - A vector based file type that can be used by most home hobby cutting machines. In particular this file type can be used with the SILHOUETTE range of cutting machines in their free software. It can also be used in the majority of CAD software if you are super clever.

FCM - A cutting file type only compatible with the Brother Scan N Cut.

EPS - This is a vector image file type that can be imported into many graphic design software packages such as Adobe Illustrator and Serif Craft Artist.

PNG - This is a raster image file type that can be imported into many graphic design software packages such as Adobe Illustrator and Serif Craft Artist.

I hope that this clarifies what is included and where to find things however if you have any other questions, please do get in touch with me at your convenience.

Best wishes,

J x
